Biztium

A cross-chain services available to all

INTRODUCTION

Developers are still innovating and coming up with new ideas involving blockchain technology. There are more and more new technologies and blockchains. Since Ethereum, a new blockchain called EVM appeared and brought new solutions in this ecosystem.

With increasing users, cross-chain solutions are needed to support cross-chain interactions and the development of new protocols to optimize existing blockchains.

Isolated assets prevent the transfer of value on the blockchain, which leads to poor competition on the blockchain and limits the development of many projects.

These challenges and barriers to entry require cross-chain technologies to be introduced into the ecosystem.

We want to be a part of this revolution and offer our innovative projects to users.
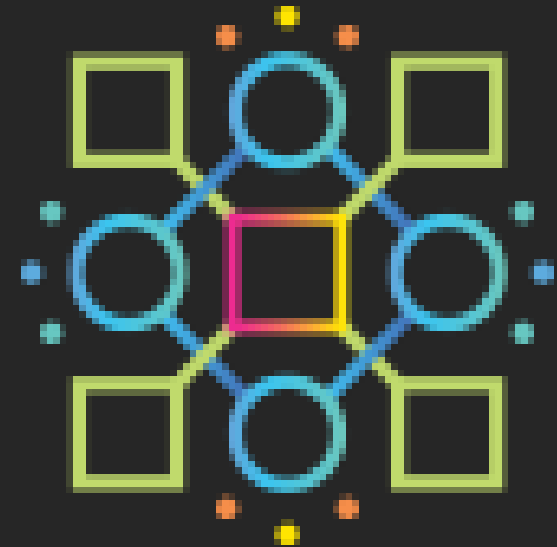

Our Vision

Our main goal is to provide a new cross-chain solution accessible to everyone!

Biztium's cross-chain goal is to provide an innovative solution that connects all existing blockchains and unlocks the value of each digital asset.

We want to facilitate the mutual integration of Dapps to support all contributors (developers, investors and blockchains) to address transfer issues and reduce transaction costs for users.

We want to make a contribution and help create a larger blockchain based financial system in the world.

What is Biztium ?

Biztium's cross-chain bridge allows you to trade digital assets between different blockchains in a 100% decentralized way.
Biztium interconnects blocks from different blockchains and allows exchanges to be made quickly and securely between all existing chains

We provide a new solution for cross-chain exchanges that is easy to use and cost-effective.

• Trade digital assets quickly and easily.

• Reduced transfer fees on different blockchains.

• An adapted and accessible cross-chain solution.

• DApps supported across multiple platforms

What is the **Problem**

01 **Few Scalable Blockchains**

Most current cross-chain solutions don't allow you to interact with all existing blockchains and are a real challenge to the development of cryptographic technologies.

02 **Cost of Trades**

The cost of cross-chain trades is high and therefore not accessible to everyone.
Not using scalable blockchains leads to expensive trading costs.

03 **Safety & Vulnerabilities**

Many cross-chain bridges today do not comply with security standards and the blockchain technology they use doesn't provide a safe environment for each trade..

Solution

Access to Scalable Blockchains

Biztium's ecosystem allows users to interact with the latest scalable EVM-compatible blockchains.

Lower Transfer Costs

The new scalable blockchains and the technologies used to link them greatly reduce gas expenses.
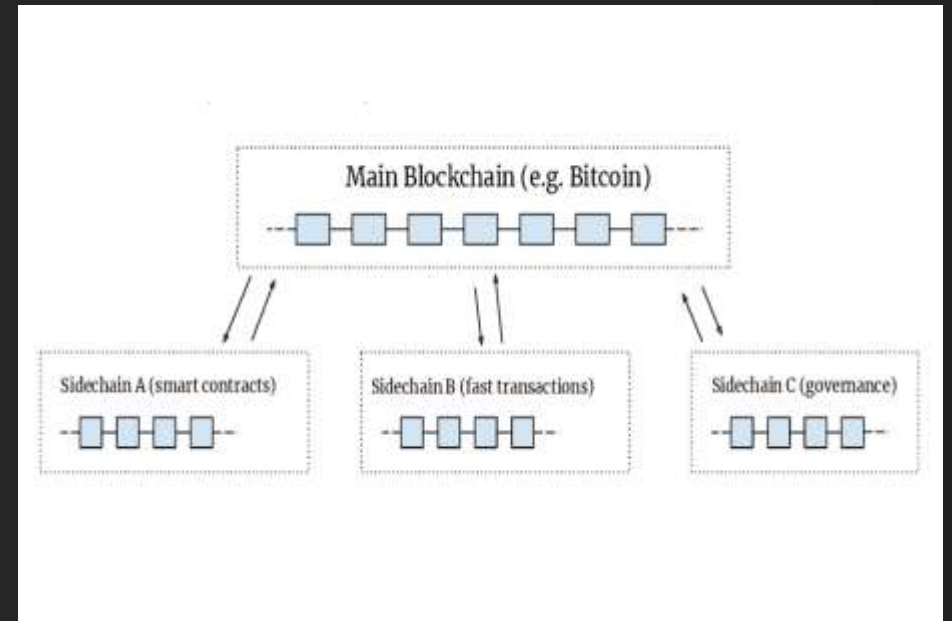

100% Decentralized Security & Use

Biztium is a 100% decentralized solution that doesn't require any intervention from centralized technology.

How it Works ?

Cross-Chain Transfer Protocol (CCTP)

CCTP is a protocol to connect decentralized applications (DApps) anonymously and securely on any blockchain.

This is made possible with API calls from any blockchain.

How it Works ?

Validator Nodes

Biztium's cross-chain validator nodes allow transfers between different blockchains to be safe. The consensus mechanism used is the delegated proof of stake (DpoS). The users elect the validators.
The status of the blockchains is recorded in Biztium's cross-chain system once it is known..

What **We Do ?**

Warranty

Our biztium team guarantees the holder does not lose, every holder who makes a sale when the price drops, we return the difference from their sales loss.

Safe & Secure

We are very concerned about the security system, so that Biztium Wallet users are safe.
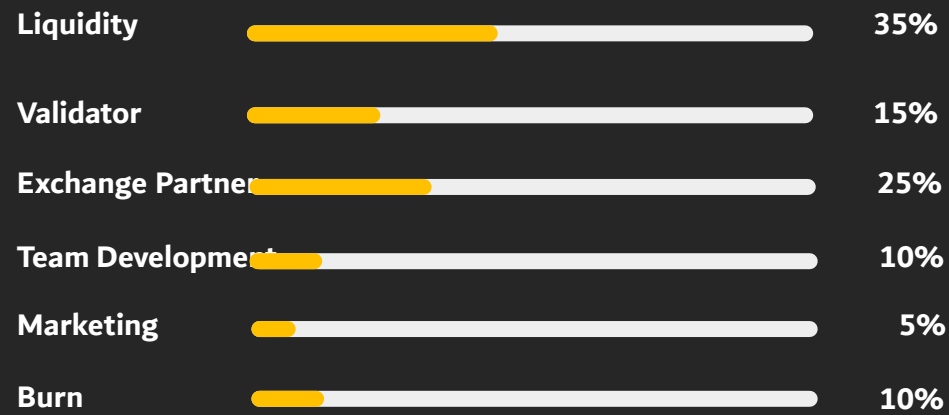

Easy to Communicate

We prioritize decentralized communication between networks.

Tokenomics

Biztium Token Details

Contract : 0x22E009Ec6B07bd360E8334a090523C67d0b2e62E

Liquidity		35%
Validator		15%
Exchange Partner		25%
Team Development		10%
Marketing		5%
Burn		10%

Coming **Together** is a beginning, staying together is progress and working together is **success**

App Biztium

We will soon release biztium wallet with latest features.

Biztium Network

We will develop biztium blockchain in the future. Bizchain is our next product..

Meet Our **Professional** Team

Gilbert Zarvakov

CEO & LEAD BLOCKCHAIN

Experienced in the field of internet networks..

Patreyev Burckev

CTO & Cyber Network

Experienced in the field of internet networks. And proficient in the field of network security.

Albert B.W.K

Backend Developer

Experienced in the field of internet networks. Proficient in solidity programming languages, java, html, and python.

Olesia Kostelenko

Software Engineer

Experienced in the field of software engineer.

Team Marketing

Artadi

Pacung Cau

Agus Naarashoki

Roadmap

Work Plan 2022
- Create Contract
- Website Launch
- Whitepaper
- KYC Logo BSCScan
- Strategic Partnership
- Bizchain Concept Meeting with team
- On Pancakeswap
- Biztium Wallet

Work Plan 2023
- Security architecture deployed
- Biztium Network Cross-chain Beta Launch
- Collect Community Feedback
- Second Marketing Deployment
- Certik Audit

Work Plan 2024
- Chain Tesnet and Partners
- CEX Listings
- App Development
- Byztium Network Cross-chain V1 Launch

Work Plan 2025
- Byztium Network Cross-chain V2 Launch
- Extended API
- Ecosystem Development
- To be continued

Thank You

For Your Attention

Crypto investing is a risky investment, but we are here to fight that risk. Biztium guarantees that those who make withdrawals when the price drops will be given the difference from the shortfall..
